

MODULAR RAMP SYSTEM

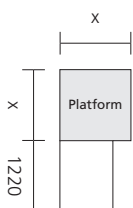

10

The ramp system is used for permanent installations of stable and secure outdoor ramps.

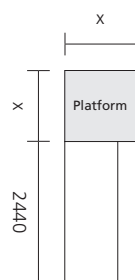

Examples of ramp kits are shown below.
A complete list showing all ramp kits can be obtained from Guldmann.
The measurements indicated are internal.

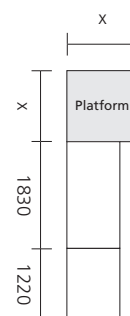

Kit A	
Height 1:20	60 mm
Length	1220 mm

Kit C	
Height 1:20	120 mm
Length	2440 mm

Kit D	
Height 1:20	150 mm
Length	3050 mm

x = Platform size 1220 x 1220 mm
 1520 x 1520 mm

Ramp width: 910 mm

Modular ramp system

Stepless has taken up the challenge against heavy, traditional ramp systems. The new ramp system is easy to manage and fits in perfectly in most surroundings.

With the new aluminium system we have taken into account the increasing demands and requirements for improved working environments in which modules must weigh less while being able to handle greater loads.

Easy to order

To make ordering simpler there are around 40 ramp kits which are delivered complete with railings, supporting legs, screws, etc. A complete list showing all available ramp kits can be obtained from Guldmann.

Heavy duty - lightweight modules

The ramp system, which is made of aluminium, can withstand loads of up to 385 kg.

High flexibility

The modules can be combined and designed so that they suit user needs and requirements.

Recirculation

The modular construction and long life cycle of 15 years make the ramp system ideal for recirculation.

Easy to fit

Installation and dismantling of the ramp system are simple and easy.

Non-slip covering

The integrated, non-slip covering is child, guide dog and high-heel friendly as the covering comes without hazardous edges and holes in the platform and ramp modules.

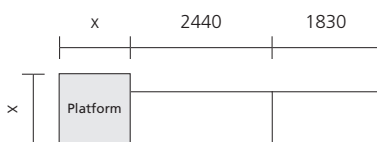

Fast delivery

The modules are always kept in stock and can therefore be delivered in a short period of time.

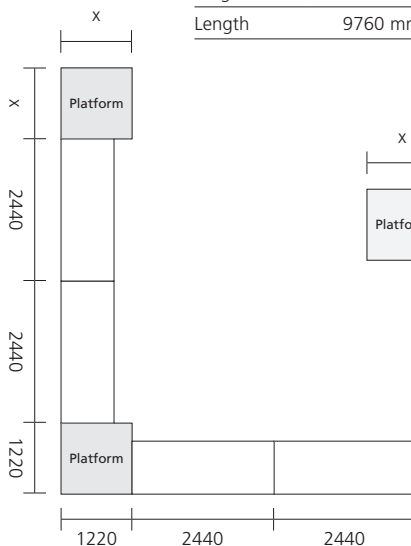

Kit F

Height 1:20	150 mm
Length	3050 mm

Kit O

Height 1:20	490 mm
Length	9760 mm

Kit P

Height 1:20	520 mm
Length	10370 mm
