

# WHY CHOOSE A PRESSALIT DUROPLAST TOILET SEAT

## High load capacity

The maximum load of the toilet seat is 240 kg.

The high load capacity also ensures a good stability of the toilet seat.

## Easy to clean

Easy and effective cleaning is essential for toilet seats. Therefore Pressalit seats are designed with no sharp angles or edges and with generous space between seat and sanitary ware.

The material is more antistatic than PP or ABS.

## Scratch free surface

Pressalit toilet seats are made of tough self-coloured duroplast (thermo set compound), which makes them scratch free and stain resistant (for example Uric acid). The polished gloss finish will retain its sparkle without fading. Duroplast toilet seats are very hygienic.

## High quality manufacture

The high quality of our toilet seats comes from an intensive manufacturing process of high temperature followed by our aftercare, where the toilet seat is trimmed and polished.

## Seat suitability

The Pressalit toilet seats are suitable for the most popular toilets. We have tested our toilet seats on a big quantity of these toilets, and the result is a special seat suitability list.

## Fire-resistant

The Urea seats are fire-resistant and it is not necessary to add fire-resistant materials.

## Biodegradable

Duroplast is biodegradable (Duroplast and cellulose are natural raw materials).
