PROJECT UPDATE

Tired of broken and unsafe commodes?

READ HERE what difference Linido Commodes supplied by JessenDakile made to Netcare Rehab Hospital, Auckland Park

Andrea (Nooky) Naude – Nursing Manager for the Netcare Rehab Hospital in Auckland Park ordered six Linido Commode / Shower / Toilet chairs after JessenDakile had loaned three various options to the hospital for a three month trial period.

The Linido range is Dutch and has approximately 7 different options ranging from the basic commode chair with no wheels to the height adjustable tilting electric controlled chair with adjustable head rest, swivel armrests, swing-away foot rests, smooth tilt to 35° and detachable soft toilet seat.

“We decided on the JessenDakile products as we were tired of local products not lasting – jamming and rusting, and wanted some value for our money” Nooky commented. “We also wanted to put our patients comfort first, and some of them do not feel secure on the light weight options. After trying the JessenDakile loan options – we had such positive feedback from both patients and staff alike, that we decided to order six products including the “Big One” (height adjustable and tilting).

Here’s what some of the patients think:

- “the toilet chair is solid unlike the blue one what wobbles”
- “the electric chair is better as I don’t get dizzy because it goes back”
- “the other chair is light and I feel I can fall with it”

Netcare Rehab had recently purchased four local products prior to the JessenDakile loaners, and Nooky has stated that she will be doing a longevity study between the local ones and the Linido ones, and will report back to us how they fare. We, at JessenDakile, know without a doubt how good our products are and can guarantee our’s will still be in pristine condition long

after the others have been consigned to the scrap heap!

LinidoSolutions product series from Handicare

The core values place the focus on the user, making sure that they are the foundation of all product developments, and these key values remain unchanged.

Safety is achieved by choosing the right safety products. Linido not only offers a comprehensive choice but also guarantees that products meet stringent requirements with regard to their strength, as well as having high weight limits. You can therefore fully trust all our sanitary safety products.

Practicality Our products are extensively tested for their functionality. Our designs are based on the support that the end user needs. Helping the user to rise from a toilet as well as offering the possibility to shower sitting down are good examples of this.

Durability In the bathroom or in wet room environments, products are often exposed to demanding conditions, e.g. moisture, cold, heat. By chemical pre-treatment, using epoxy coating, stainless steel and plastic materials, a long lasting service life is guaranteed for the user.

Ergonomics At Linido, ergonomic aspects like seat height, seat width, seat depth, seat angle and arm rest shape play an important role in the product design. Therefore we product develop from the dimensions and natural movements of the human body. For example, our grab rail Ergogrip is designed to a 60° angle instead of the traditional 90°, so hand and wrist retain a natural position while holding the Ergogrip.

Design Much attention is paid to the design of our products. Where possible round shapes are used, which is advantages from a hygienic point of view while at the same time having a pleasing, modern look. Fixing points are concealed and different colour options allow bathrooms to be arranged to suit individual styles and tastes.
